

This heatmap displays the distribution of the variable 'Age' across the 2010 US Census data. The x-axis represents the age groups (1 to 20), and the y-axis represents the census tracts. The color scale ranges from dark blue (low density) to red (high density). The highest density is observed in the age group 18-19, particularly in the census tracts corresponding to the first 10 rows. The density decreases as the age group increases, with the lowest density observed in the age group 1-2.
